

ABSTRACT OF THE DISCLOSURE

An imaging system according to various aspects of the present invention comprises a sensor providing image data to a data processing unit. The data processing unit suitably comprises an interface that may interact with one or more types of devices, such as a network interface and an adaptable interface. The data processing unit may also include an image processing system for storing image data and/or manipulating the image data to enhance images. The data processing unit may also include a display for viewing images relatively quickly following acquisition of the image data.
